

Project Info
for joint board meeting
Saturday 25th April
08:00-09:30 UTC

Content of this Info Pack:

1. Purpose
2. Product
3. Price
4. Promotion

5. Partnerships
6. Platform
7. People / Philosophy
8. Physical evidence/Photos

Purpose

Mission Statement:

We aim to deepen the understanding of and support for space while inspiring kids, especially girls, to value their education and together with their communities become lifelong climate champions.

We proudly amplify the story that the space industry is building satellites that capture vital climate data which empowers humanity to understand, protect, and sustain Earth for generations to come.

Product

An **online educational workshop**
which we often refer to as an “**edu experience**”.

Facilitated by a global army of (quasi) volunteers.
→ kids' school teachers can have a pause/break:
we take over from them.

Concretely: 2 modules (sessions / classes / lessons):

- ✓ 1st) about space (direct access: [here](#))
- ✓ 2nd) about climate change (ala [Climate Fresk](#))

Each is 2-3 hour long (adaptable).

NB 1st: beautiful multimedia PPT + interaction (think “slido”).

NB 2nd: Climate Fresk has had 2 million participants!

Important: On purpose **only** in (simple) English.

We want to push kids (12-15) out of their comfort zone.

Because English is key to a better life... in a global world.

Product evolution

We're thinking of introducing a 3rd module: film-making.
All aspects of how to make HQ films with a mobile phone.

Than as homework assignment kids need to create a film about space, climate change or the link between the two.

We will put their videos on our social media channels and create a competition: best films win (cool) prizes.

→ For kids the hands-on solidifies learning.
→ And for us to reach a 3rd tier of audience.

NB. 2nd tier = parents, family, school, community iow direct contacts

With some luck we'll go viral!

Other ideas/products/delivery methods:

(AI) narrate the space module → put on YouTube.
Create a MOOC: Massive Open Online Course.
Ultimate goal: Netflix documentary?

-> **massive** engagement with general public through social media

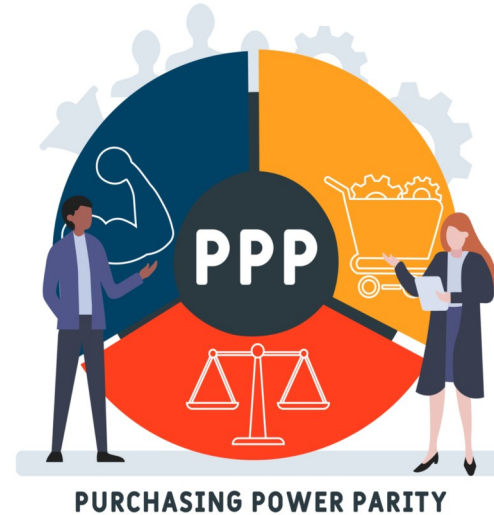

Price

We will ask the parents of participating kids a small registration fee (+- price of BigMac).

We will employ PPP: purchasing power parity.
Also known as [BigMac Index](#) / [burgernomics](#).
NB. Click for more info.

→ We want to be **as fair as possible**.

100% of fees goes to the online facilitators.
The organisation does **NOT** take a percentage.
(Nb. We have minimal cost now, all carried by Jim et al.
+ confident that we will obtain corporate sponsors soon.)

100%
→

This works OK if kids are @EU/USA + facilitator is in a low wage country. → We dub this the “**Robin Hood**”-model.

Other way round, not so. We need to rely on enthusiasm of volunteers OR through earmarked sponsoring / subsidising.

Why will it work?

- 2 **hot topics** combined: interest almost guaranteed.
- Core content is 90% there, scaling up is **unlimited**.
- Amount of work is **do-able**, even for volunteers.
- Innovative way of working: **extremely efficient**.
- Virtually everybody **LOVES** our approach.

Partnerships

Space4Climate.com' partners/members:

Space4Climate.com is a source of inspiration for us.

Different than them, we'll want to have: 1) "supporters", 2) "partners" and 3) "sponsors", see next 3 slides.

Partnerships

Space Agencies will be called: “**supporters**”

NB. These logos merely illustrate the *potential / possible* supporters.

NB. Currently we only/already got support from **AEB, the Brazilian Space Agency**.

NB. In a previous project (Apollo+50) Jim got support from several Agencies: low hanging fruit.

Partnerships

Space and non-space organisations will be called: “**partners**”

NB. This image merely illustrates *potential / possible* partners.

Partnerships

Industry will be called: “**sponsors**”, they provide material / in-kind support.

NB. This image merely illustrates the *potential / possible* sponsors.
We prefer not to have: platinum, gold, silver as this feels too “commercial”.

Partnerships

Board support requested

GLOC2026 in Kigali is a concrete milestone and a **HUGE opportunity** to formalise partnerships *before* + *during*. The sheer number of GLOC [IPC members](#), [speakers](#), [companies](#), sponsors, [media partners](#): let's roll up our sleeves

Help us make the best of GLOC: introduce us to your contacts / connections that introduce us to their contacts...

GLOC 2026
IAF GLOBAL SPACE
CONFERENCE ON
CLIMATE CHANGE

INTERNATIONAL
ASTRONAUTICAL
FEDERATION

HOST:

RSA
Rwanda Space Agency

Promotion

A very important aspect is promotion. Space agencies and organisations will be asked to help us get in contact with schools / teachers.

(Part of) financial support from industry
can be invested in (online) promotion.

We did online “research” & collected
MANY contacts we’ll actively approach.

Platform(s)

We recently established a co-operation with **AEB** who are looking for “content providers”, given the defunding of GLOBE. Perfect match!
We’ll work together to provide online classes via [their platform](#):

Another massive platform is the [EC Education for Climate Coalition](#).
A community of 1000’s of climate educators. NB. Many from Turkey.

[World Space Week](#) has impressive numbers in recent years.

Others: [GLOBE](#), [IAF](#), [AIAA](#), [Earth Day](#), [Teach Unions](#) etc.
Of course, social media: LinkedIn, Facebook, etc.

Education for Climate Coalition

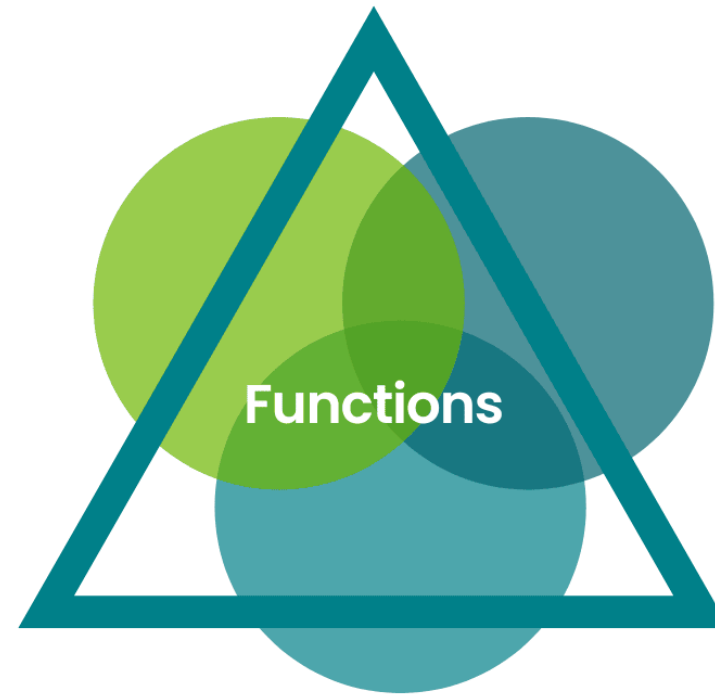

Platform

We are, or at least our website is also a platform. A platform to bring together demand from teachers, schools, clubs, etc., (also from individuals) and match that with supply, namely from our “army” of (quasi) volunteers.

In essence the role of the organisation, and of all central volunteers is like that of a clearinghouse, see points on right:

- we will monitor the quality of our offering / performance of our volunteers.
- booking “edu experiences” will be easy.
- we will actively promote Space4Climate.org with the aim to maximise the number of kids that can benefit from our programme.
- the website is available 24/7 (of course).

Clearinghouse

Provides standardised norms regarding quality, quantity, price, etc.

Provides smooth flow of and enhances total amount of transactions

Ensures that the system is available 24/7

People

To make clear what we stand for, what our core values are, what our philosophy is:

We are: not-for-profit.

We are: volunteers.

We are: global.

We are: diverse.

We are: multi-culti.

We are: fair.

We are: collaborative.

We are: kind.

Physical evidence / Photos

Given 1 image is a 1000 words...

And that it is super important to show that the project is real and creates positive impact, we will capture screenshots of the first couple of sessions and other opportunities (such as Kigali).

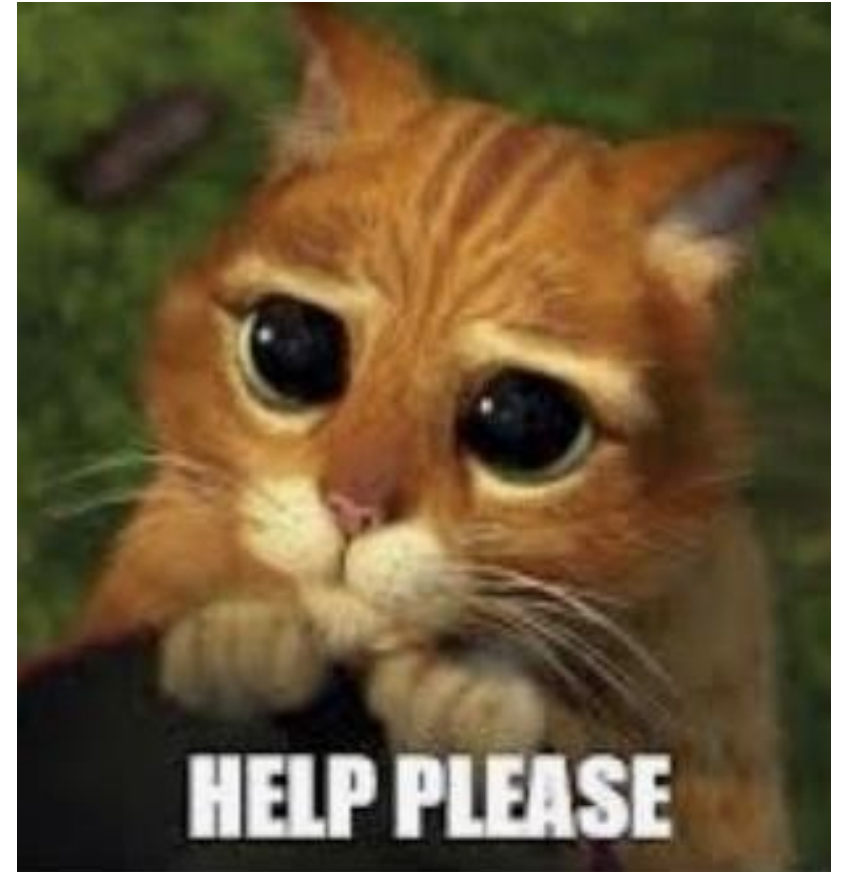

For our website + social media.

What we need help with:

- Spreading the word / promoting our name.
- Promotional materials: posters, stickers, etc.
- Help find a VIP (?) as narrator/presenter.
- Further enhancing our website.
- Usage/development of tools.
- Shooting and editing of videos.
- Travel to political, industrial, education events.
- Prizes: travel to COPx or Space Camp.

Further ideas and suggestions are welcome.

The 6 strategy questions

- 1) What are the pros and cons of introducing a 3rd module (on **film-making**)? Does it provide a lot of value?
- 2) What are the pros and cons of making the content freely available on **YouTube**? Ditto for it being a **MOOC**?
- 3) Does a **fair pricing** model add value? How should we handle situations where schools can't charge parents, or when a key partner does not allow such a model?
- 4) What are realistic **sponsor tier levels**, and how should they be named? Which sponsors or supporters should be excluded on ethical grounds, if any?
- 5) What's the most suitable **legal form**/structure, and in which country should it be established?
- 6) What's the risk of legal consequences related to **partially replicating** the concept of Climate Fresk?

Roadmap

CONTEXT

The Opportunity

- Global youth engagement
- Space + Climate differentiation
- Scalable model

The Reality Check

- Ambition > proof
- Limited validation
- Credibility gap

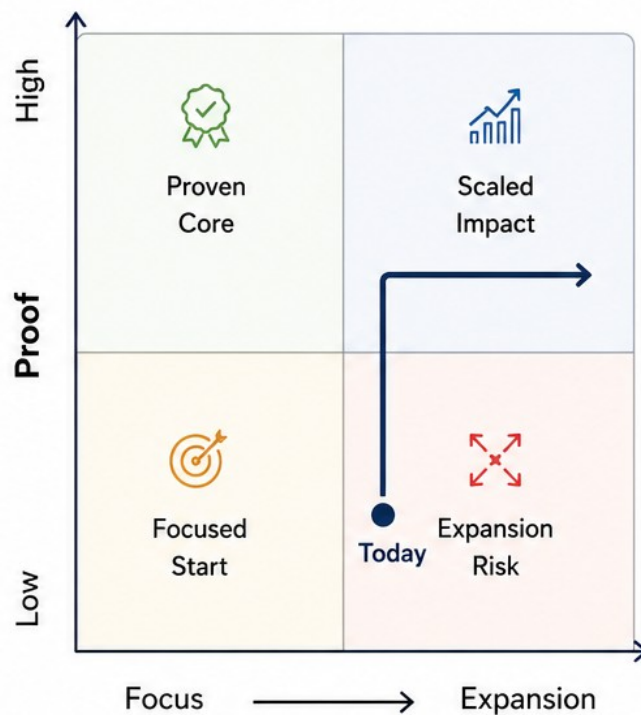

What We Heard (Consistently)

- Strong mission belief
- Concerns on focus
- Need proof first

*No disagreement on “what” —
only on “when”*

INSIGHT

Where We Are vs Where We Need to Be

Prove first → then scale

ACTION

The One Priority

- World-class live sessions
- Repeatable
- Measurable impact

Everything else supports this

6-Month Roadmap

- 3+ country pilots
- Collect feedback
- 1 institutional partner

Distribution Strategy

YouTube → Awareness

Live Sessions → Core Experience

MOOC → Scale

Feeds
credibility
+ impact

How We Build Credibility

Pilot

Data

Stories

Visibility

Partners

Two Paths

A. Prove First

Pilots → Data → Credibility

B. Expand First

Modules → Platforms → Complexity

We recommend: Prove first

Our focus now: prove impact, build credibility, unlock scale.

Roadmap > concrete steps forward

- Do 2-3 online test runs of Space module (only) before Kigali.
 - Finish off Climate module before end of June.
 - Develop next steps with Brazilian Space Agency.
 - Review + update website.
 - Find suitable (group availability) booking tool.
 - Cross-train online facilitators (first from core team).
 - Draft roles: social media, ops, marketing, fundraising, partnerships, etc.
 - Create teams + management structure and do weekly 1-hour telecons.
 - Create sponsorship package (sponsors tell their story/what they do).
 - Create promotional material.
 - Approach visionary / early supporters.
- In parallel:
- Officially register organisation: notary → CoC
 - Open bank account
 - Move to discord to enhance communications.

Partnerships

Board support requested

GLOC2026 in Kigali is a concrete milestone and a **HUGE opportunity** to formalise partnerships *before* + *during*. The sheer number of GLOC [IPC members](#), [speakers](#), [companies](#), sponsors, [media partners](#): let's roll up our sleeves

Help us make the best of GLOC: introduce us to your contacts / connections that introduce us to their contacts...

Concrete Requests to Board Members

- Please identify who to approach / open doors for us:
Wrt partnerships, supporters & sponsors.
Especially GLOC [IPC members](#), [speakers](#), [companies](#)
- Sponsor something specific, like posters, stickers, etc.
- Share your wisdom with us. We appreciate it!
- Ask us challenging questions. It will make us do better.
- Join the core team! (not for everyone, of course)

Now more relevant than ever:

Thank you
